

The University of Jordan

Sustainable Investment Policy

Deans' council Decision No.:2023/19

The University of Jordan has made significant strides in investing in sustainability and cutting-edge research facilities. With a strong commitment to environmental responsibility, the university has spearheaded projects in renewable energy, aiming to harness clean power sources like solar to reduce its carbon footprint. Additionally, the establishment of a state-of-the-art Cell and Therapy Center demonstrates their dedication to advancing medical science and healthcare, offering cutting-edge treatments and fostering groundbreaking research. Moreover, the National Center for Diabetes Endocrinology and Genetics (NCDEG) showcases the university's inclusive approach, focusing on empowering individuals with diabetes through education, research, and support services. These sustainable investments not only reflect the university's commitment to a greener future but also its dedication to advancing knowledge and making a positive impact on society.

The University of Jordan is at the forefront of embracing a sustainable future, with ambitious plans to invest in various eco-friendly initiatives. One of its main focuses is the development of wind energy projects, aiming to harness the region's abundant wind resources to generate clean and renewable electricity. Additionally, the university is committed to promoting recycling practices campus-wide, implementing comprehensive waste management systems to reduce its environmental impact. To address water scarcity in the region, the university is actively exploring water harvesting methods to optimize water usage and enhance sustainability. Moreover, recognizing the importance of reducing greenhouse gas emissions, the university is determined to transition its entire car fleet to clean energy alternatives, eliminating the use of fossil fuels and contributing to a greener campus and community. With these forward-thinking plans, the University of Jordan is setting an inspiring example for other educational institutions and fostering a culture of environmental responsibility.
