Instrumental Methods of Analysis (6 ECTS)

Instrumental Analysis and Laboratory Automation (5 ECTS)

### **Research interests**

Studies are focused on recently proposed flow methods based on the concepts of sequential injection analysis, multi-commuted flow injection analysis, and Lab-on-Valve. These techniques provide in-line automation of chemical and enzymatic reactions (enzymes in solution or immobilised), separation processes (gas-diffusion, dialysis, ion-exchange) and pre-treatment processes (mineralization/extraction assisted by micro-wave and ultra-sounds). The objective is to miniaturise the systems/sensors and minimise consumption of reagents and effluents production. Applications to environmental and food analysis are envisaged.

### **Supervising experience**
